

DITHANE M-45

Preharvest intervals (PHI)

Tomatoes, potatoes, and vegetables	3days
All other edible crops	7days
Citrus	14days
Grapes	28days

KEY BENEFITS

- A mancozeb based fungicide with a proven superior activity to other carbamates like Zineb and Maneb.
- Has broadspectrum protectant activity effective in many crops.
- Low risk resistance due to multisite mode of action
- High margins of crop safety. It is not phytotoxic to sensitive crops eg. Cucurbits where other carbamates are not recommended.
- Compatible with most commonly used fungicides, insecticides, miticides and growth regulators.
- Low persistence in the enviroment (degraded by chemical process on plant surfaces, and by biochemical processes in plants, animals and soil micro-organisms)
- No leaching potential
- Has a short pre-harvest interval.
- Potential health benefits to the plant of micronutrients Mn and Zn.
- Primary resistance management tactic for single site fungicides.
- The preferred partner of systemic and penetrant fungicides.

PACKS AVAILABLE

12x1kg, 12x500g, 12x200g, 24x100g
