

HUMICAL

Stimulates roots and root hair development

Composition :

Humic Acids	8,0 % w/w
Fulvic Acids	2,0 % w/w
EDTA-Calcium (CaO)	2,8 % w/w
K ₂ O	6,0 % w/w

**HUMICAL application
doubles the root volume**

- Improves fertilizer uptake
- Optimalizes water availability
- Increases stress resistance

**more YIELD
and
better QUALITY !!**

Control

CARNATIONS : 20 Lts/ha + 5 Lts per Month (Drip)

BEANS : 20 Lts/ha + 10 Lts/ha + 10 Lts/ha (Drip)

CUCUMBERS : 3 Lts/m³ incorporation in substrate

HUMICAL is a liquid product containing Humic and Fulvic acids plus Calcium chelated with EDTA and K_2O . Recommended for Calcium deficient soils, and for soils where Calcium is unavailable to the plant root system. 1Lt of Humical contains same % of Humic Acids as 7-8 tonnes of organic manure.

RECOMMENDATIONS

Horticultural and ornamental plants:

Soil application: total dosage of 35-65 Lts/ha. First application: one week after sowing or transplanting. Apply 20 Lts Humical in first split and then 5 Lts every month thereafter.

Foliar application (Beans, Tomatoes, Potatoes): at week 3 after transplanting/sowing and at week 5 at a rate of 3 Lts per ha in 1,000 Lts water.

Hydroponic systems: a dose of 20 Lts for first application and then 5 Lts every 2 weeks thereafter.

For systems which recycle the water: a dose of 5 Lts/ha of Humical is recommended.

Fruit trees:

Soil application: total dosage of 35-65 Lts/ha. First application: at the beginning of the growth season.

Dose split: applications separated 2-3 weeks, applying halve the total dose each time.

COMPATIBILITY

Compatible with most fertilizers and phytosanitary products and foliar fertilizers.

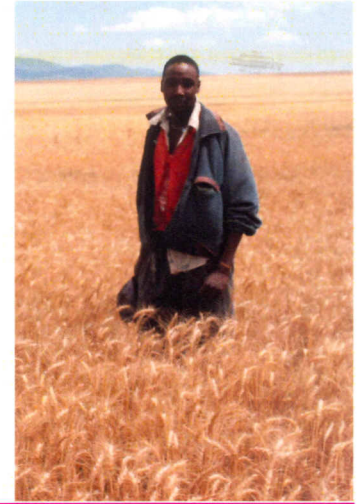

A small trial test should be done prior to a full commercial application esp if mixing with pesticides.

If doing foliar applications Humical should be sprayed on its own.

Control

Humical

WHEAT : 3 Lts Humical in 300 Lts of water

Humical

CABBAGE:

40 Lts/ha before seedlings planting
