

# Turbo-Top Fertilizer

A compulsory follow-up for Turbo Seed **Zn** soon after germination

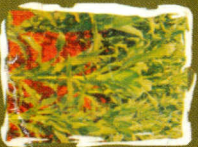

Turbo-Top fertilizer is a P & K concentrate with the essential Chelated Cu, Zn & Mn as micro-nutrients with Fulvic acid, as a binder, that is used to supply the necessary primary nutrients through foliar spray or soil drench instead of the conventional phosphates or Pks.

It is available in 500g, 2Kg & 20Kg packs

WHEAT

BEANS

# Turbo-Top:-A new source of P!

## What is Turbo-Top ?

A fertilizer concentrate powder composed of 100% water soluble **P205** (39%), **K20** (25%), **Zn** (1%), **Cu** (0.75%), **Mn** (0.5%) and fulvic powder. All micro-nutrients are chelated by EDTA to avoid antagonism.

**How is Turbo-Top applied:-**As a foliar spray or soil drench

**How Much Turbo-Top should be applied**

1. Foliar spray:-4Kg/acre (may be split into 2 applications of 2Kg/acre)
2. Soil Drench:-6Kg/acre (may be split into 2 applications of 3Kg/acre)

**When is Turbo-Top applied:-**At the early stages of plant growth and at flowering

## Who NEEDS to use Turbo-Top ?

- a) For those farmers who planted with Turbo Seed Zn instead of conventional granular fertilizers
- b) For any farmer who planted WITHOUT any fertilizer
- c) Any farmer who DID NOT apply the recommended FULL DOSE of DAP or NPK
- d) Any farmer who used FULL DOSE of DAP and NPK and is not sure of soil fertility status.

NB:-Adopting the **Turbo Seed Zn/Turbo-Top** regime allows the farmer to reduce the phosphate cost by ALMOST 50%! (2008). The farmer may use NPK (23:23 or 17:17) at planting at the rate of 30Kg/acre to provide the starter Nitrogen.

It is recommended that with **Turbo Seed Zn/Turbo-Top** combination, the farmer should foliar spray early using **TWIN-N (nitrogen fixing bacteria)**

For best results, always apply **Turbo-Top** with Vitazyme at the rate of 0.4L/acre.

✕ NB: For a fertilizer replacement program that include TURBO-Seed, Vitazyme and TWIN-N please call:
